

KASTOretrofit

Modernisation and expansion of systems for sawing and storing metal

Preserving everything that is good, and making targeted investments.

The search for the right decision.

The name KASTO stands for the quality and longevity of its products. It means that they can be updated and extended with the latest components to provide greatly extended service life, particularly as far as control technology is concerned.

Modernisation represents a cost-effective alternative to purchasing new equipment. Functional adaptations or expansions can also be implemented during this phase.

The task.

Modernisation and possibly expansion of the machine / system with minimum downtime and timely resumption of production.

The goal.

KASTOretrofit will adapt your machine / system to current requirements and will restore its position as the most powerful and reliable module in your production and logistics chain.

Our expertise, your benefit.

Your partner.

KASTO provides you with service and support from a single source for all aspects of the implementation of your project. And all of this with the usual KASTO quality.

KASTO has decades of experience in construction and service of over 1,700 warehouse systems and more than 140,000 sawing machines. We analyse your requirements and develop an optimum package of measures that is specially tailored to your requirements.

Our retrofit team exclusively consists of experienced KASTO engineers with knowledge from many Retrofit projects.

Your benefit.

KASTOretrofit will increase and safeguard the availability and performance capability of your saw / warehouse system. KASTOretrofit minimises stoppage times during conversion and guarantees that production will start up again on time. KASTOretrofit is significantly cheaper than a new investment. KASTOretrofit guarantees a supply of mechanical spare parts for 20 years for KASTO products.

KASTOretrofit for warehouse systems.

- Control replacement, conversion to latest KASTO control concept
- Updating of drive systems
- Updating of positioning systems
- Revision of system sensor systems
- Updating of safety equipment
- Replacement of warehouse storage system
- Coupling of KASTO warehouse management computer with customer-provided HOST system
- Optimisation of processes using system simulation
- Overhaul of mechanical components
- Replacement of integrated sawing machines

Before - After

Extended or combined measures.

- Relocation of entire systems
- Shelf block extensions
- Workstation enhancements

Before - After

Retrofitting sawing systems.

- Overhaul on site or at KASTO
- Control replacement, conversion to latest KASTO control concept
- Updating of drive systems
- Updating of positioning systems
- Updating of safety equipment
- Mechanical/electrical general overhauls

Extended or combined measures:

- Relocation of sawing machines including associated peripherals
- Addition of material input and output systems to sawing machines

The Complete KASTO Program: Economic Sawing and Storing of Metal.

Expertise right
down the line.

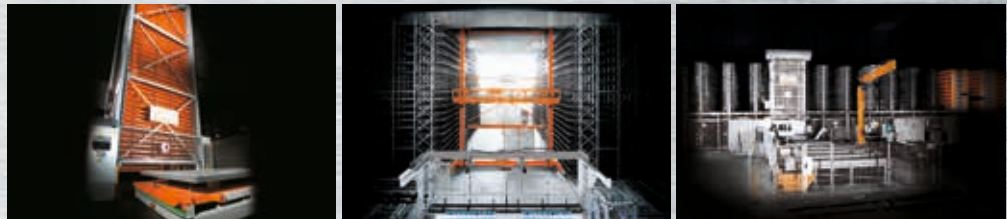

For over 170 years, KASTO has been recognized for quality and innovation, and offers a complete range of metal cutting saws, as well as storage and retrieval systems. Thanks to an ongoing development of new technologies and constant optimization process of machine concepts, KASTO has achieved the status of market leader in sawing and storing of metals.

KASTO's
Sawing Machines.

From the basic hacksaw to the high-performance automatic bandsaw capable of economically processing bar stock, blocks or plates of all grades, KASTO has the best solution for every challenge: Universal bandsaws and circular saws for light and medium applications, hacksaws employing the pushing-arching-cutting motion originated by KASTO, and production bandsaws and circular saws designed to cut medium to difficult materials.

KASTO's
Storage Systems.

Rapid access, optimum space utilization, clear and accurate view of stored inventory – KASTO storage systems' exelling features. And there's more! Fully automatic sawing centers, cantilever bar and sheet metal storage systems or cassette storage and commissioning systems, combined sawing and storage systems with integrated inventory control computers. As a one-source supplier, KASTO delivers the complete system, both hardware and software.

KASTO's
Service.

KASTO's comprehensive service program includes everything: from commissioning and training to maintenance support, service contracts, readily available spare parts and on-site service. KASTO's service incorporates individual consulting and immediate support with well-qualified teleservice. And of course, KASTO service is available worldwide.
